The Jerome Public Works Department is working diligently to complete maintenance work on the fire hydrants that are on the water mains near your property.

This maintenance work may result in sediment, and rust possibly, containing lead, in your water service lines and faucet screens.

It is recommended that you flush your lines (typically a bathtub, or a faucet on lowest level without an aerator screen) for at least 5 minutes then remove and clean any debris from faucet aerators.

It's important you are aware that Infants and young children may suffer adverse health effects as a result of exposure to lead.

**More information on lead can be found at:**  
<https://www.cwlp.com/LeadAwareness>  
Or scanning this QR Code with your smartphone
