

Important Information About Your Drinking Water

Failure to Comply with a Testing Procedure

The Village of Jerome Water system recently failed to comply with a required testing procedure. Even though this was not an emergency, as our customers, you have a right to know what happened and what corrective action was taken.

We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not our drinking water meets health standards. During the month of September 2021 we failed to complete one of the samples required for the **Revised Total Coliform Rule (e.Coli)** and therefore cannot be sure of the quality of our drinking water during that time. Any sample collected must be sent and analyzed by a certified laboratory within a specified amount of time.

What should I do?

There is nothing you need to do. You do not need to boil your water or take other corrective actions. You may continue to drink the water. If a situation arises where the water is no longer safe to drink, you will be notified within 24 hours. We will hand deliver notices, and post this information on our website at

www.villageofjerome.com

What is being done?

During October 2021 we collected all required samples of our finished water in order to have it analyzed for **Revised Total Coliform Rule (e.Coli)**. The samples were delivered to the certified laboratory within the specified time. The sample was analyzed and the Revised Total Coliform Rule was not found at detectable levels.
